

ALWYN SAJAN

alwynsajan@gmail.com | +61-428-609-693 | Australia

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SKILLS

Languages: Python, C, C++, JavaScript

Web / Frameworks: Django, FastAPI, Flask, React, HTML, CSS

Databases: SQL, MySQL, MongoDB, MariaDB, SQLAlchemy (ORM)

DevOps: Linux, Docker, Git, CI/CD (basic)

Cloud: AWS (EC2, S3, Lambda)

AI / ML: Machine Learning, Deep Learning, NLP, RAG Pipelines, Large Language Models, Multi-Agent Systems, LangGraph, LangChain, Prompt Engineering

WORK EXPERIENCE

Department of Health (WA Health) | Perth, Australia

Nov 2025 – Dec 2025

Data Systems List Power Apps Intern | Internship, On-site

- Delivered a full-featured Power Apps solution within a 2-month internship, consolidating management of systems, documents, changes, issues, and tasks into a single SharePoint-integrated interface.
- Designed UX features including dynamic data filtering, status-driven colour coding, and program-based navigation - reducing task lookup time for end users.
- Sole developer on the project; presented working solution to department stakeholders and handed off documentation for ongoing team use.

AllGoVision Technologies Pvt Ltd | Bangalore, India

Jul 2022 – Jun 2024

Software Engineer | Full-time

- Engineered multi-camera tracking pipelines in Python and C++, processing real-time video feeds for enterprise-grade surveillance deployments across multiple concurrent camera streams.
- Built and optimised backend REST APIs using Flask, SQL, and MongoDB, improving API responsiveness and enabling secure, scalable communication between frontend and backend systems.
- Developed internal automation and workflow tools using Tkinter, reducing manual effort and improving operational productivity for engineering teams.
- Refactored and modernised legacy C++ and Python modules - improving runtime efficiency, eliminating technical debt, and maintaining adherence to team coding standards.
- Collaborated in an agile team of 40+ engineers using Git-based code review workflows and sprint planning cycles.

PROJECTS

Ada - AI News Discord Bot (RAG + Agentic Workflows)

May 2026

Tech: Python, Discord.py, LangGraph, LangChain, Sentence Transformers, Groq API, Scikit-learn, SQLite, BeautifulSoup4, APScheduler, VADER Sentiment Analysis

- Built an intelligent Discord bot (Ada) that automatically fetches, filters, summarises, and answers questions about the latest AI news using Retrieval-Augmented Generation (RAG) and LangGraph-driven agentic workflows.
- Integrated multiple AI news sources (RSS feeds, Hacker News, Reddit), implemented semantic vector embeddings with cosine similarity search, and built a RAG pipeline for contextual question answering over stored news articles.
- Designed a modular pipeline separating news fetching, scraping, embedding, storage, and response generation, with scheduled and on-demand fetching via Discord commands and asynchronous event handling.

UWA Logistics Agent - Graph-Orchestrated Multi-Agent AI Platform (UWA AI Club) Dec 2025 – Feb 2026

Tech: Python, Django, React, Vite, LangGraph, LangChain, OpenRouter LLM, MariaDB, Docker, REST APIs, Google Calendar API

- Built a stateful multi-agent AI platform using LangGraph with conditional routing and persistent memory to orchestrate specialised ReAct agents for dynamic intent classification.

- Automated room bookings, event management, poster generation, notifications, and interest-based recommendations - replacing manual workflows with a single-prompt agentic pipeline.
- Delivered a Dockerised full-stack deployment (React + Vite frontend, Django backend, MariaDB) with Google Calendar synchronisation for production-ready, scalable deployment.

Customer Relationship Management (CRM) System - Freelance Project

2024

Tech: Python, PySide6, MariaDB, RDBMS, OOP

- Designed and developed a full-featured CRM desktop application for a small business client, covering invoice generation, sales recording, stock management, and barcode-based cart management.
- Applied OOP principles and relational database design to ensure scalable architecture, robust data integrity, and a maintainable codebase delivered to a live production environment.

WalletWhiz - Personal Finance Web Application (UWA)

Apr 2025 – May 2025

Tech: Flask, Python, SQLAlchemy, HTML, CSS, JavaScript, jQuery, AJAX, Jinja, Unit Testing, Selenium

- Created a full-stack personal finance platform enabling users to manage budgets, visualise expenses, and download financial summaries via interactive dashboards.
- Ensured application reliability with extensive unit tests and Selenium-based end-to-end test coverage.

Multiple Camera Tracking - AllGoVision Technologies

2022 – 2024

Tech: Python, C++, SQL, OOP, Docker

- Enhanced a production-grade multi-camera tracking system for vehicle and pedestrian detection, improving legacy C++ and Python modules to reduce processing latency.
- Contributed to modularising and containerising components using Docker for more reliable, scalable deployment workflows.

EDUCATION

University of Western Australia | Perth, Australia

Jul 2024 – Jul 2026

Master of Information Technology

GPA: 6.267 / 7.0

TKM College of Engineering, Kollam | India

2018 – 2022

Bachelor of Technology - Electronics & Communication Engineering

CGPA: 9.02 / 10.0

CERTIFICATIONS

- Machine Learning Specialization - Coursera (Andrew Ng, Stanford Online)
- Joy of Computing Using Python - NPTEL (Score: 90%)
- Python Basics - HackerRank
- Responsive Website Basics (HTML, CSS, JS) - Coursera
